Technical Information: SPC Root Fertilizer NPZBio

Chemical name :	SPC Root Fertilizer NPZBio
	Organic stimulant for root development and nutrient uptake
CAS-No. :	Gemisch
Synonym :	Bio Wachstumsförderer, Wurzelstimulanz, Nährstoff

General informations :

Thanks to the special and innovative blend of plant extracts and nutritional elements (especially phosphorus and zinc), SPC Root Fertilizer NPZBio accelerates root emission and the root growth process. The fulvic acids and the polyphenols contained in the product stimulate the plant to expand its root system, while phosphorus and zinc (together with the other elements) support the process from a nutritional perspective.

In addition, the organic acids contained in SPC Root Fertilizer NPZBio intensify microbial activity, thereby ensuring a long-term improvement in soil conditions. Other organic compounds derived from selected botanical extracts show a complex activity that makes all nutrients in the soil available to the plant from the outset.

Application :

For these reasons, SPC Root Fertilizer NPZBio is the ideal product to be applied in fertigation after transplanting (vegetable crops, new orchards, etc.) to promote early root emission. It is particularly suitable for berry crops such as strawberries, raspberries, and blueberries, as well as apples and cherries.

In addition, SPC Root Fertilizer NPZBio drip fertigation is an optimal fertilization option for a wide range of other crops, e.g., tomatoes, cucumbers, hops, onions, and leaf lettuce.

With rapid root emission and an expanded root system, young plants will show growth earlier.

Even if the root system is damaged by abiotic factors (e.g., flooding) or biotic factors (nematodes, click beetles, etc.), SPC Root Fertilizer is the perfect tool to quickly rebuild an efficient root system.

Hazard Informations :

SPC Root Fertilizer NPZBio is not a hazardous substance. Nevertheless, we recommend observing the general safety instructions for handling fertilizers and keeping the bio-nutrient out of the reach of children.
